3. RECOMMENDATION

SUMMARY: * EII Task Force (12/18/98)–IR28 and IR31

* Add the data elements Delivery Zone, Imbalance Reporting Type, Receipt Zone, Scheduling Tolerance Delivery Quantity, Scheduling Tolerance Receipt Quantity, and Service Requester ID.
* Delete the data elements Adjustment Value and Imbalance Value.
* Change the definition of the data elements Operational Delivery Quantity, Operational Receipt Quantity and Zone Identifier.
* Move the data elements Adjustment Quantity and Adjustment Type from the Transaction Specific Data Group (TSDG) to the Flowing Gas Data Group (FGDG).
* Change GISB Standard 2.3.34 by adding the data elements Delivery Zone, Imbalance Reporting Type, Receipt Zone, Scheduling Tolerance Delivery Quantity, Scheduling Tolerance Receipt Quantity, and Service Requester ID; deleting the data elements Adjustment Value and Imbalance Value; and moving the data elements Adjustment Quantity and Adjustment Type from the Transaction Specific Data Group (TSDG) to the Flowing Gas Data Group (FGDG).
* For each data element in the Shipper Imbalance data dictionary, add EBB usages for each of the Imbalance Reporting Types.

BUSINESS PROCESS DOCUMENTATION (for addition, modification or deletion of business process documentation language)

Standards Book: Shipper Imbalance, 2.4.4

Technical Implementation of Business Process:

Contract imbalances occur when there is a difference between allocated receipt and delivery quantities, with a deduction for transportation fuel if applicable. A critical component in the development of a reliable, responsive natural gas administrative infrastructure involves the regular reporting of imbalances to the service requester (generally the shipper or its agent) by the service provider (generally the pipeline). Standard 2.3.28 addresses this by stating that "Imbalance statements should be generated at the same time or prior to the generation of the transportation invoice." The data elements described herein were identified as necessary to provide meaningful imbalance statements to all parties.

[The TIBP continues by listing all of the data elements in the Shipper Imbalance with their definitions**—this listing is deleted**. The text of the Technical Implementation of Business Process continues as shown below.]

*The **imbalance reporting type** (IRT) identifies the type of imbalance reporting structure being used.*

The pathed IRT is used to communicate imbalances that are reported using upstream, receipt, delivery and downstream information.

The non-pathed IRT is used to communicate imbalances that are reported using either upstream and receipt information, or delivery and downstream information.

The pathed non-threaded – threaded IRT is used to communicate imbalances that are reported using receipt and delivery information (but not upstream or downstream information). The pathed non-threaded – threaded IRT may be used independently from, or in conjunction with, the pathed non-threaded – unthreaded IRT.

The pathed non-threaded – unthreaded IRT is used only in conjunction with the pathed non-threaded – threaded IRT. Together these two IRTs are used to communicate imbalances that are reported using upstream, receipt, delivery and downstream information.

4. SUPPORTING DOCUMENTATION

a. Description of Request:

R96124 Modify the Shipper Imbalance to support Pathed Non-Threaded model type.
R97020 Modify the Shipper Imbalance to support all model types.
R98064 Add four data elements (Delivery Zone Identifier, Direction of Flow, Receipt Zone Identifier, and Service Requester) to the Shipper Imbalance.
R98069 Add four data elements (Contract Daily Tolerance, Quantity in Excess of Contract Daily Tolerance, Variance Percent, and Variance Quantity) to the Shipper Imbalance.
R99005 Modify the definitions of the Operational Delivery Quantity and the Operational Receipt Quantity.

b. Description of Recommendation:

EBB-Internet Implementation Task Force (December 1, 1998)
IR24—To defer this motion on Proposed Ordering for Shipper Imbalances (2.4.4) until IR has completed its work on groupings and to send all flowing gas datasets to IR for grouping.
Action: Passed unanimously

R98064: IR28—Instruct IR to accommodate the ability to send Delivery Zone Identifier, Direction of Flow and Receipt Zone Identifier as Sender's Option (SO); and Service Requester* as Mandatory (M) in the Shipper Imbalance (2.4.4) dataset.
Action: Passed unanimously

R98069: **IR31**—Instruct IR to accommodate the ability to send Contract Daily Tolerance in the Shipper Imbalance (2.4.4) dataset as Sender's Option (SO).
Action: Passed unanimously

Information Requirements Subcommittee (April 1, 1999)
IR sent the following questions to BPS:

1) Is the Adjustment Quantity data element needed? How is the data element used? Since the adjusted quantity is shown at the line item level, what goes in this data element?
2) If the Adjustment Quantity is used, does it reflect the difference or the net quantity? And, the difference or net between which two quantities?
3) Additional Adjustment Type Code values are needed to specify adjustments made to any of the quantities that are included in the statement?

IR sent the following questions to BPS on January 10, 2000:
The Information Requirements (IR) subcommittee sent a set of questions concerning the Shipper Imbalance (2.4.4) to the BPS dated October 10, 1999. Unfortunately, we failed to mention in that memo that the data element 'Adjustment Value' is also a concern to IR. Could you please consider the following questions?

1) Is the Adjustment Value data element needed? How is this data element used?
2) Should the Adjustment Value be communicated at the line item level? If not, at what level should this data be communicated?

Business Practices Subcommittee
BPS reviewed the additional questions posed by IR and answered as follows:

Motion: The Adjustment Value data element should be eliminated from the Shipper Imbalance dataset.

The motion was voted and passed unanimously.

Information Requirements Subcommittee
Discussion: There was consensus that BPS did not direct IR to delete the data elements Adjustment Quantity and Adjustment Type. Additionally, there was consensus that those data elements should reside at a higher level, i.e. at the same level as the Service Requester Contract. Therefore, the data elements Adjustment Quantity and Adjustment Type are moved to the detail level in the X-Ref. It is now necessary to assign usages for these data elements for each model type.

Adjustment Quantity usages by model type ----> Pathed - C, Non-Pathed - C, Pathed Non-Threaded Threaded Segment – C, and Pathed Non-Threaded Unthreaded Segment – C

The condition remains "For imbalance – based upon Adjustment Type".

Adjustment Type usages by model type ----> Pathed - C, Non-Pathed - C, Pathed Non-Threaded Threaded Segment – C, and Pathed Non-Threaded Unthreaded Segment – C

The condition remains "For imbalance – (e.g. trades, transfers, cashouts, storage, payback, PTR, fuel, makeup, penalty fuel, etc.) based upon adjustment of imbalance quantity. When this condition is met, for EBB, at least one of Adjustment Type or Adjustment Type Name is required".
Note: the preceding usages for the data elements Adjustment Quantity and Adjustment Type are also applicable to the EBB.

The next question, then: are the current code values for the data element Adjustment Type still appropriate?

Current Code Values for the data element Adjustment Type:

Actual quantity correction
Allocated Quantity correction
Allocation detail correction
Allocation Method correction
Fuel Quantity correction
Scheduled Quantity correction

The existing code values remain appropriate. However, the following additional code values are also required:

Code Value Description	Code Value Definition	Code Value
Supplemental Quantity correction	[no definition necessary]	
Cashout	Imbalance quantity adjustment due to cashout	
Imbalance Trade	Imbalance quantity adjustment due to imbalance trading	
Transfer	Imbalance quantity adjustment

due to an imbalance transfer

Research was performed by Dale Davis regarding Standard 2.3.34. Dale's analysis indicates that the data elements Delivery Zone, Receipt Zone, Scheduling Tolerance Delivery Quantity, Scheduling Tolerance Receipt Quantity, Service Requester ID, and Service Requester name have been properly ordered, per Standard 2.3.34.

Since the data element Adjustment Value has been deleted, it will be removed from the Transaction Specific Data Group. The data elements Adjustment Quantity and Adjustment Type should be moved from the Transaction Specific Data Group to the Flowing Gas Data Group, immediately after the data element Ending Imbalance Value.

Issue to be sent to the Business Practices Subcommittee:
The definition of the 'Zone Identifier' data element in the Shipper Imbalance should be revised to correspond to the definitions of the two new data elements 'Delivery Zone' and 'Receipt Zone'. IR's recommended definition is: "The transportation service provider's identifier for the geographic zone in which the imbalance is reported". The usage of the data element will remain 'Sender's Option'.

MOTION: Approve the modifications to the Shipper Imbalance Data Dictionary, Sample Paper Transaction, Technical Implementation of Business Process, and Data Element Cross Reference workpaper, approve the modifications to Standard 2.3.34, and send the issue documented above to the Business Practices Subcommittee.

Issue for IR:
We will send back the Sample Paper for "Pathed Non-threaded - Threaded and Unthreaded" to IR for them to reconsider the layout of the Sub-sub-detail section in the example. It appears that the Upstream Identifier Code and Downstream Identifier Code should be in separate Sub-detail sections with the corresponding Receipt Location and Delivery Location instead of in the Sub-sub-detail section.
Issue for IR:
We do not have an exact list of the Code Value Descriptions for Imbalance Reporting Type, so we will send this back to IR and ask them to provide us with the descriptions. This table may be updated based on their response.

c. Business Purpose:

With the adoption of this Recommendation, the Shipper Imbalance will be usable by parties that employ a variety of reporting types. Six (6) data elements were added, two (2) data elements were deleted, two (2) data elements were moved from one data group to another, and corresponding changes to the ordering standard for the Shipper Imbalance (2.3.34) were made to address this business need.

In addition, definitions for three (3) data elements in the data dictionary were changed to clarify the meaning of the data elements, and code values were added to two (2) data elements to allow for communication of applicable information.

* Indicates Common Code

** When a Transportation Service Provider's proprietary location code is employed pursuant to this standard, the parties agree that nominations, confirmations, scheduled quantities, and capacity release documents employing such code should be for one gas day at a time, and used only until there is a verified common code for the point associated with the proprietary location code. This would include daily nominations over a weekend. Within two months following the availability of the location the parties should employ the common code and no longer employ the proprietary code for identifying such location in the data sets related to the identified standards.
