NAESB Electric Industry Registry (EIR) Expected to Replace NERC TSIN Registry on November 13, 2012

It is expected that the parallel test of the NAESB EIR (also known as the OATI webRegistry) will conclude on November 13, 2012. On that date, the NERC TSIN Registry will cease publishing registry data and the NAESB EIR will become the official source of registry data.

Documentation concerning entities, POR/POD and Source/Sink data that has not been registered in the OATI webRegistry, and a more detailed cutover plan will be provided by OATI through the following hyperlink: http://www.naesb.org/weq/weq_eir.asp. All files will be posted as soon as they are available.

Important Cutover Dates and Activities:

- **November 06, 2012 - November 13, 2012:** No changes made in both the TSIN Registry and OATI webRegistry. New registrations/modifications should be made in advance, in both TSIN and webRegistry.
- **November 07, 2012:** OATI webRegistry will begin to provide pending publications to the TSIN Registry. The TSIN Registry FTP site will continue to be the source for active registry publications.
- **November 13, 2012:** OATI webRegistry becomes the sole source for registry publications; the TSIN Registry site will be decommissioned. New registrations and modifications are again available in webRegistry.
- Entities not yet registered are asked to complete registration by **November 06, 2012**. All entities should perform data verification in OATI webRegistry in advance of this date.
- Set-up of FTP credentials is required for those Entities that wish to continue using FTP access to download registry data.

Please contact the North American Energy Standards Board with questions at 713.356.0060 or naesb@naesb.org or OATI Support at 763.201.2020 or support@oati.net for technical support concerning registration.
